DETAILED ACTION

This action is in response to the submission filed on 12/10/08. Claims 1-3, 5-14, and 17-23 are presented for examination.

Response to Arguments- 35 U.S.C. §101

- 1. Applicant's arguments filed 12/10/08 have been fully considered but they are not persuasive.
- 2. Applicant argues there is a sufficient tie to another statutory class for claims 1 and 11, however, while the preamble states that the method is performed using a computer, little to no weight is assigned to that which is in the preamble. No specifics are given as to **what** performs the various method steps.
- 3. Applicant argues that claims 1 and 11 transform an article into a different state or thing. However, the claim recites changing **matrix representations** of signals. This amounts to a mere manipulation of data, not a transformation. Data manipulation is not sufficient to be statutory subject matter, as there still must be a **practical application** for a mathematical algorithm.
- 4. Applicant argues that claim 14 is not software *per se*. However, the claim recites a "computer operative" to perform various steps. A computer operative is broad enough to reasonably include a software module or program.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Art Unit: 2123

- 5. Claims 1-3, 5-14 and 17-23 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.
- 6. Claims 1-3, 5-13, and 17-23 state that a method is performed using a computer, and as little to no weight is assigned to that which is in the preamble, there lacks a sufficient tie to another statutory class. In addition, *mathematical transformations* of the RF signal (the manipulation of representations of the RF signal) is not sufficient to be statutory subject matter. Mathematical algorithms require a practical application. All depending claims are rejected as well.
- 7. Claim 14 recites a "system comprising a computer operative". However, there is no definition provided in either the specification or the claim for "computer operative". A computer operative could be referring to a software module. Giving the claims a broad reasonable interpretation, the claim comprises a software system and is therefore held as software *per se*.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.
